

A Stronger Pallet that Doesn't Break Down or Contaminate Product

Our reusable plastic pallet is a stronger alternative to wood pallets that reduces overall cost. These pallets reduce damage to products and last longer in high volume supply chains. Our plastic pallets are also non-porous, eliminating the risk of contamination by water absorption and bacteria growth in clean environments.

Efficient

Features such as a large fork opening, ergonomic design, and a flow-through top deck increase efficiency, cleanliness, and are overall safer for workers.

Durable

Superior strength creates excellent impact resistance and is ideal for cold environments where breakage with wood pallets is a concern.

Hygienic

Plastic pallets can be cleaned, reducing the risk of contamination. They also don't produce wood chips or splinters and cannot absorb moisture like wood pallets.

Features and specifications

Hygienic Flow-Through Design

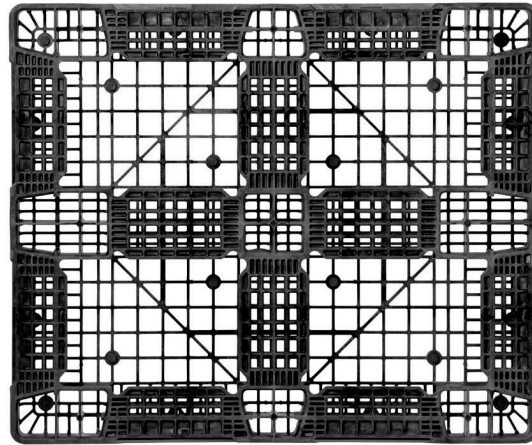

Ideal for food and pharmaceutical applications

Edge-Rackable

Durable design capable of meeting your racking needs

Traceable

Bar code and RFID capable

Consistent Sizing

Pallets are injection molded with precision so sizing is consistent and there is zero disturbance to your automated handling

Sustainable

Reusable and recyclable at end of life

Progenic GMA+

Height	5.6 in
Length	48 in
Width	40 in
Weight	41 lbs
Static Load Rating	20,000 lbs
Dynamic Load Rating	3,500 lbs
53' trailer quantity	570
